The information in the chart below was obtained from the National Electric Code Table 430-148 and 430-150 and from U.L. Industrial Control Standard 508. The voltages shown are standard rated motor voltages. The currents listed are permitted for system voltage ranges of 110-120, 220-240, 440-480, and 550-600 volts.

The full load current values listed are for motors running at standard speeds with normal torque characteristics. Motors which are non-standard, such as low speed, high torque or other special applications may have higher full load currents.

Caution: For accurate and reliable motor protection, motor nameplate current should be used to obtain actual motor full load amps for all motors.
